EAZA EEP Entry Guide

Step-by-step walkthrough for entering the two Madagascar-relevant EAZA Ex-situ Programmes (EEPs) into the registry. Closes Alex-ToDo §2.7.

Where: https://api.malagasyfishes.org/admin/ — sign in as a Tier 5 superuser account. Production, not local.

Time: ~20-30 minutes of admin clicking. Two institution rows, two program rows.

Source: `data/reference/April_2026_8e69dc12b4.pdf` — EAZA Ex-situ Programme overview, April 2026, page 1, rows 31 (Madagascar rainbowfishes) and 36 (Cichlids).

---

0. What this entry unlocks

Two `CoordinatedProgram` rows + two `Institution` rows tied to the April 2026 EAZA programme overview.

What it **does** unlock:

- Real, sourced reference data to point at when discussing the coordinator dashboard at ABQ — instead of empty state.
- Panel 5 (Transfer activity) program-name surfacing — when a Transfer is logged that references one of these programs, the program name appears next to it.
- Schema-shape proof — demonstrates the platform models the EAZA → species → institution chain correctly. Useful for SHOAL / EAZA conversations.

What it **does not** unlock on its own:

- Panel 2 (Studbook status) buckets. Panel 2 reads `ExSituPopulation.studbook_managed`, not `CoordinatedProgram` rows. So §2.7 alone leaves Panel 2 empty unless an anchor species also has a captive population logged. See §3 "Optional follow-on" below.

---

1. Pre-flight check

Both anchor species are already in the registry — no need to add them:

- `Bedotia madagascariensis` (Bedotiidae, IUCN: EN)
- `Paretroplus menarambo` (Cichlidae, IUCN: CR)

Neither institution exists yet — both will be created in Step 2.

No existing `CoordinatedProgram` rows in the system; this is the first entry of its kind.

---

2. Create the two institutions

Do these first — Step 3 references them via autocomplete.

2a. Bristol Zoo Project

URL: `/admin/populations/institution/add/`

Field	Value

Name	`Bristol Zoo Project`
Institution type	`zoo`
Country	`United Kingdom`
City	`Bristol` *(or leave blank if uncertain)*
`eaza_member`	✓ checked
`zims_member`	✓ checked
`aza_member`	unchecked

Click **Save**.

Notes: Bristol Zoo Project is the post-2022 successor to Bristol Zoo Gardens. It coordinates two Madagascar-relevant EEPs in the April 2026 overview (Bedotiidae rainbowfishes and Valenciidae toothcarps); this guide covers only the Bedotiidae one.

2b. National Aquarium Denmark

URL: `/admin/populations/institution/add/`

Field	Value
Name	`National Aquarium Denmark`
Institution type	`aquarium`
Country	`Denmark`
City	`Kastrup` *(operates as Den Blå Planet, near Copenhagen — or leave blank)*
`eaza_member`	✓ checked
`zims_member`	✓ checked

Click **Save**.

---

3. Create the two CoordinatedProgram rows

3a. Madagascar rainbowfishes EEP

URL: `/admin/populations/coordinatedprogram/add/`

Field	Value
Species	`Bedotia madagascariensis` *(autocomplete)*
Name	`EAZA EEP: Madagascar rainbowfishes (Bedotiidae)`
Program type	`eep`
Status	`active`

Coordinating institution	`Bristol Zoo Project` *(autocomplete; created in 2a)*
Studbook keeper	leave blank — Charles Fusari is not a registry user
Enrolled institutions	leave empty
Plan summary	`EAZA EEP for the Bedotiidae rainbowfish family. Coordinator: Charles Fusari (Bristol Zoo Project). IUCN Red List status: EN. Source: April 2026 EAZA Ex-situ Programme overview.`
Plan document URL	blank
Start date	blank
Next review date	blank

Click **Save**.

3b. Madagascar cichlids EEP

URL: `/admin/populations/coordinatedprogram/add/`

Field	Value
Species	`Paretroplus menarambo` *(autocomplete)*
Name	`EAZA EEP: Cichlids (Cichlidae)`
Program type	`eep`
Status	`active`
Coordinating institution	`National Aquarium Denmark` *(autocomplete; created in 2b)*
Studbook keeper	leave blank — Peter Petersen is not a registry user
Enrolled institutions	leave empty
Plan summary	`EAZA EEP for the Cichlidae family. Coordinator: Peter Petersen (National Aquarium Denmark). IUCN Red List status: CR. Source: April 2026 EAZA Ex-situ Programme overview.`
Plan document URL	blank
Start date	blank
Next review date	blank

Click **Save**.

---

4. Verify

Open `/admin/populations/coordinatedprogram/` — both rows should appear, with their species and coordinating institution rendered correctly.

Open `/dashboard/coordinator/` — Panel 5 (Transfer activity) will still be empty (no transfers logged yet). Panel 2 (Studbook status) won't move from §2.7 alone — that requires §3 below.

---

5. Optional follow-on — make Panel 2 move

If you want the dashboard to register a visible change from this entry session, add one `ExSituPopulation` row alongside each program. ~60 seconds per row once the institutions exist.

5a. Bedotia madagascariensis at Bristol Zoo Project

URL: `/admin/populations/exsitupopulation/add/`

Field	Value
Species	`Bedotia madagascariensis` *(autocomplete)*
Institution	`Bristol Zoo Project` *(autocomplete)*
`count_total`	best-known number, or `0` placeholder if unknown
`count_male` / `count_female` / `count_unsexed`	leave blank if unknown
`breeding_status`	`breeding` if confirmed, otherwise `unknown`
`studbook_managed`	✓ checked *(EEPs run a studbook by definition)*
`last_census_date`	today's date

Click **Save**.

5b. Paretroplus menarambo at National Aquarium Denmark

Same form as 5a, but:

Field	Value
Species	`Paretroplus menarambo`
Institution	`National Aquarium Denmark`
`studbook_managed`	✓ checked
(other fields as in 5a)	

After saving, Panel 2 on the coordinator dashboard moves both species from "No captive population" into the **"Studbook-managed"** bucket.

---

6. After ABQ — what to revisit

- **Real population counts.** The `count_total = 0` placeholder gets refreshed once Charles Fusari / Peter Petersen share actual numbers. Either reach out post-workshop or let the rows sit as schema-presence markers until ZIMS data flows in.
- **Family-level program modeling.** The data model currently uses `CoordinatedProgram.species` as a single FK, so each family-level EEP needs an "anchor" species. If post-ABQ work expands the model to carry family-level programs (Gate 4 Phase 2 candidate), these rows can be migrated to the new shape — keep the original entries untouched until then.
- **Other EAZA EEPs of tangential interest.** From the same April 2026 overview, none of these are Madagascar-endemic, so don't enter them against this registry — but useful context if asked at ABQ:
  - Goodeids (Goodeidae) — Chester Zoo, Joe Chattell, EW-EN
  - Sail-fin silversides / Pseudomugilidae — Jens Bohn, CR-DD
  - Toothcarps (Valenciidae) — Bristol Zoo Project, Brian Zimmerman, CR
  - Mudminnows (Umbridae) — Tiergarten Schönbrunn, Anton Weissenbacher, VU
