Husbandry Platform Copy

Status: Draft for review **Author:** conservation-writer **Date:** 2026-04-18 **Related:** Gate 09 AC-3, AC-7; BA locked decisions 2026-04-18 (Q3). **Surfaces covered:** Platform husbandry disclaimer, CARES/SHOAL-emphasized teaser variants (three sizes). Sourcing-ethics component reviewed separately (see bottom of this document).

---

1. Platform husbandry disclaimer

Surface: Every `/species/[id]/husbandry/` page, rendered by `frontend/components/HusbandryDisclaimer.tsx`. Appears directly beneath the page title, above the at-a-glance panel. **Budget:** 2–4 sentences, one short paragraph. **Voice notes:** Factual, not a legal screen. Trusts the reader's judgment. No "always," "never," "warning." Source attribution (keepers + published sources) is the load-bearing phrase — it tells the reader what this content is and is not.

Copy

> *This guidance reflects practices reported by keepers and drawn from published sources. It is not a protocol, and conditions vary between systems, regions, and individual fish. Use it as a starting point, compare it against other references, and consult a qualified aquatic veterinarian for health concerns.*

Citations: Phrasing anchored in BA §5 (docs/planning/business-analysis/ species-profile-husbandry.md, 2026-04-18, locked). No quantitative claims.

---

2. CARES / SHOAL-emphasized teaser — three variants

Surface: `frontend/components/HusbandryTeaser.tsx`, rendered on `/species/[id]/` between Captive Population Summary and Field Programs, only when `has_husbandry` is true. Emphasized visual treatment applies when `cares_status` is populated or `shoal_priority` is true (AC-09.8). **Link target:** `/species/[id]/husbandry/`. **Voice notes:** Invitational, not promotional. Assumes the reader knows CARES and SHOAL, or will click through to learn. Name the organizations; do not add adjectives. No "must-read," no "essential," no exclamation marks. Present tense. Third person (the species), not second person (the reader).

Variant A — short (≤12 words)

> *A CARES / SHOAL priority species. See husbandry guidance →*

Word count: 8.

Variant B — medium (≤25 words)

> *A CARES / SHOAL priority species with active breeder interest. See what keepers have reported about water, diet, and breeding →*

Word count: 21.

Variant C — long (≤45 words)

> *Listed by CARES and prioritized by SHOAL, this species is actively kept and bred by a small network of institutions and hobbyists. The husbandry page collects what those keepers have reported — water parameters, tank setup, diet, behavior, and breeding triggers →*

Word count: 41.

Notes for implementation:

- When only one of `cares_status` / `shoal_priority` is set, swap the combined phrase accordingly: "A CARES priority species" or "A SHOAL priority species." The variants above assume both; single-flag rewrites follow the same pattern and stay within budget.
- The link text "See husbandry guidance →" (Variant A) is consistent with the non-emphasized teaser link text used elsewhere, so the CTA phrasing is stable across treatments and only the framing sentence changes.
- Do not add a priority badge *and* spell out "CARES / SHOAL priority" in the body — that is redundant. Pick one surface for the signal (badge or prose) and let the other carry context.

Citations:

- CARES program — Conservation, Awareness, Recognition, and Encouragement for Species (hobby-sector priority list; see CLAUDE.md project glossary).
- SHOAL — freshwater-fish conservation initiative; 1,000 Fishes Blueprint referenced in CLAUDE.md external integrations.
- "Active breeder interest" framing anchored in BA §1 (audience: CARES hobbyist and institutional aquarist; husbandry page is the acquisition surface for both).

---

3. Sourcing-ethics component review

File: `frontend/components/HusbandrySourcingEthics.tsx` **Verdict: Confirmed voice-aligned. No rewrite.**

Checklist:

- Acknowledges permitted wild-collection under permit (BA Q3 locked) — covered in paragraph 2 ("Responsible wild collection happens under permit…").
- Distinguishes conservation collection from aquarium-trade collection — covered ("This is conservation work, not the aquarium trade.").
- Directs hobbyists to CARES / Citizen Conservation / partner institutions as the default source — covered in paragraph 3.
- Voice is factual, non-judgmental, present tense; no alarmist language; no second-person broadcast.
- Cross-links to `/about/data/` for data-handling context — present.

No changes made to the file.

Summary of TODOs

None. All claims above are sourced to the BA doc (locked 2026-04-18), Gate 09 spec, and CLAUDE.md terminology conventions.
